

To Whom it May Concern,

I'm applying for the Web and Site Reliability Engineer position because I have a strong history with a variety of programming languages, but specifically Swift through my work on iOS apps.

Also, I've been involved with music from a very young age, taking lessons in guitar and trumpet, and recently picking up the ukulele and piano. Even still, I sign in a choir, and we had our Christmas concert just last Sunday.

I have some experience with AWS, specifically their Lambda and API Gateway technologies, through a website I made a couple years ago for taking polls, akin to Strawpoll.com

I've worked on various open source projects with multi-national teams, so remote collaboration won't be a problem.

I look forward to hearing back from you soon about this opportunity.

Regards,
Isaac
