Object Oriented Programming	9/10
Git/GitHub	8/10
Software Development	8/10
Mobile Development	7/10
Python	7/10
SQL	7/10
Swift	7/10
Ruby	5/10
Web Development	5/10

PROJECTS

Nobility

February 2022

Nobility is a web application written in Python with Django. This project showcases a strong understanding of OOP, an efficient use of a SQL, front- and back-end design, REST design, build automation, and input validation. Being managed through GitHub, this project demonstrates the ability to use version control to develop software and track issues.

Nobility is a platform for tracking a large number of computer repairs through the full repair life cycle (diagnose, repair, QC).

I Got Gas

September 2020

I Got Gas is a fully functional native iOS application written in Swift UI.

This project showcases a careful ORM implementation, complex input validation and sanitation, accurate computation, and simple presentation. I Got Gas, being managed through GitHub, demonstrates an understanding of git's version control, pull requests, branches, merges, and more.

The purpose of this app is to track vehicle expenses and provide reports about driving costs.
